

Judge Consulting Group

Your Partner in Technology Consulting solutions for your Business

CONSULTING * STAFFING * TRAINING

Judge Consulting Group is your single source for Technology Strategy and Project Based Consulting Services. As your partner, Judge is immersed in your business and intent on attaining its goals. We are committed to delivering the right, tailored solutions to yield effective results for your business.

What Makes Us Different:

- Deep industry expertise, streamlined project management methodology, and emphasis on business processes which enable Judge to unite the right talent, professional skills, and technologies that will help you achieve your objectives.
- Flexible delivery model that combines the key elements of project management, subject matter experts and experienced staffing to best meet your needs.

Our Portfolio of Services:

At Judge, we make it our business to know your business. As a leader in the technology services industry, we have subject matter and technical experts who know the competitive landscape of your industry and understand the challenges your company is facing.

▲ TECHNOLOGY STRATEGY & ARCHITECTURE:

We offer a full range of services to identify and assess our clients' environment and provide specific recommendations to improve your bottom line. Judge professionals and industry experts work with you to assess your current software applications and infrastructure to create a comprehensive plan that fits into your overall business strategy. We can help you understand your positioning and effectively manage your technology investment with a reusable development model and methodologies to maximize quality and reduce risk.

Capabilities:

- ▶ Technology Assessments
 - Assessments of current application and infrastructure architectures
 - Information system and business alignment services
 - Evaluation of current and future staffing needs
 - Information system cost reduction
- ▶ Service Oriented Architecture Services
- ▶ B2B Integration and Optimization
- ▶ SharePoint Implementation

▲ APPLICATION DESIGN & DEVELOPMENT:

We work closely with our clients to drive business value through implementation of advanced technology. We help our clients improve time to market, reduce costs, and mitigate risks associated with implementation of leading edge technologies. Our consultants are seasoned professionals with expertise in business process design. We implement industry best practices and are experts in application development; from initial needs analysis and high-level design through final quality testing and ongoing maintenance.

When you work with Judge you engage with computer science professionals who apply leading-edge technologies and toolsets to give you a measurable competitive advantage. Deep industry expertise, disciplined project management methodology, and a strong focus on business processes enable Judge to unite the right talent, professional skills, and technologies that will help you achieve your objectives.

- ▶ Service Oriented Architecture
- ▶ Content Management Strategy
- ▶ Custom Application Design & Development
- ▶ Outsourcing & Off-Shoring

Service Delivery Options:

- ▶ On-Premise
- ▶ Off-Site
- ▶ Off-Shore

▲ **MICROSOFT OFFICE SHAREPOINT TECHNOLOGY SOLUTIONS DEVELOPMENT SERVICES:**

Microsoft Office SharePoint Services have become a broadly adopted industry standard platform for enterprise communication and collaboration. There are many reasons the SharePoint platform is the first tool enterprise organizations have turned to for group collaboration. Companies both large and small need to capture, aggregate and integrate information across the organization and securely deliver it in a personalized, single point of access. They need to enable information workers to easily collaborate on projects, documents and meetings with co-workers, partners and customers.

SharePoint serves as a portal and knowledge repository for the capture, collaboration and communication of enterprise information, best practices and organizational learning. Information workers can sign into SharePoint once and have a view into multiple systems such as business intelligence, project management systems, and existing line-of-business applications.

By working with Judge Consulting Group we can assist your organization in building a platform for gaining access to accurate and timely corporate intelligence. We are uniquely qualified to help you improve your performance management, inventory management, and production planning and control while also offering your user community an easy-to-use toolkit for collaboration, centralizing and indexing documents and facilitating meetings and projects.

MOSS 2007 offers business intelligence features that allow you to track key performance indicators and build BI dashboards into your team site. The dashboards can assemble and display business information using Excel spreadsheets, SQL, or can be integrated with line of business applications. Excel Services in MOSS go beyond simply displaying Excel spreadsheets and give you access to real time information. Workflow can also be integrated into MOSS 2007 as it can serve as a platform for basic workflow and other advanced information management functions.

The Judge Consulting Group SharePoint team can work effectively with your organization or independently to build custom solutions focused on improving how people collaborate by creating, streamlining and automating key business processes. Additionally, we can also build solutions to utilize technologies such as Active Directory, SharePoint Portal Server, Excel Services, InfoPath and SQL Server.

A sample of features commonly integrated into a MOSS production environment can include Alerts, Microsoft Office Integration, SharePoint Mobile Access, SharePoint Application Templates, E-mail Enabled Sites, PowerPoint Slide Libraries, Improved Search, Blogs, RSS Feeds, Wiki Sites & Pages, Announcements, Calendars, Contacts, Document Level Security, Task, Discussion Forums, Document Libraries, Document Review Sites, Form Libraries, Custom Web Parts and Lists.

OTHER INFORMATION AND RECORDS MANAGEMENT SERVICES:

▲ **RESEARCH VALIDATION & COMPLIANCE:**

Judge offers Validation & Compliance and Advanced Technology solutions for the pharmaceutical, biotechnical, and medical device industries. Our team of technical and scientific experts bring the knowledge and experience necessary to offer the best solution to meet the needs of our clients. Our tailored approach allows us to carefully evaluate each project, with our team of subject-matter-experts, and maximize value for both large and small projects.

- ▶ Validation & Compliance capabilities cover the full range: 21CFR part 11, Part210/211, GAMP4, Part 320, Part 820, Part 58

▲ GOVERNANCE, RISK & COMPLIANCE (GRC):

The Judge Group's GRC Practice specializes in developing enterprise-wide sustainable and compliant Information Lifecycle Programs for managing both unstructured and structured electronic information assets, physical documents, e-mail content and data archives.

Our deep industry knowledge combined with unbiased subject matter expertise enables us to provide our clients with the right GRC program to compliment their corporate culture, budget and needs. By utilizing in-country consultants across a global network, we aim to bridge cultural and language gaps and enhance the quality of service we provide to our clients.

With today's compliance and risk landscape, organizations must be proactive in developing enterprise data, document, and records policies and procedures that are both sustainable and compliant. This is why Judge provides experienced consultants to assist multinational organizations in implementing information business rules that conform to today's regulatory and compliance requirements.

SERVICES:

Information Lifecycle Management:

- Paper and electronic information creation, distribution and storage
- Data repositories, identification/taxonomy standards and disposition processes
- Information access and security
- Information preservation processes
- Risk mitigation through information access standards and volume reduction

Enterprise Business Rules Development and Implementation:

- Records management policy/standards
- Electronic messaging policy/standards
- Retention guidelines
- Back-up media policy/standards
- Records management procedures

eDiscovery Process Development:

- Hold policies
- Collection procedures
- Enabling technology selection

Global Retention Regulation Research:

- Original in-country retention and reporting research (treaty, country and local level)
- Standard nomenclature linked with retention citations
- Copy retention identification using operating requirements
- Information custodian identification
- Vital and historical records identification

Inactive Media and Legacy System Data Identification:

- ERP system data categorization and retention
- Archive media preservation

Results through the Power of Experience
